DETAILED ACTION

Priority

Acknowledgment is made of applicant's claim for priority under 35 U.S.C. 119(a)(d) based upon an application filed in France on 7/5/1999. A claim for priority be based on said application, since the United States application was filed more than 30 months thereafter.

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 2/28/2005 has been entered.

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-7 and 9-24 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Application/Control Number: 10/019,694

Art Unit: 1621

The claims recite a dehydrofluorination process comprising converting carbamovl fluoride to the corresponding isocyanate. However, the claim is indefinite since it lacks those steps for specifically performing this process.

The claims recite that carbamoyl fluoride is introduced in a solvent heel. It is unclear what applicant intends by this addition.

The rejection under sections 102 and 103 are withdrawn in favor of the following prior art rejections.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 1-5, 10, 13, 14, 15, 16, and 18 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. Patent No. 3,860,623 to Zanker et al. (Zanker).

The invention is drawn to a dehydrofluorination process to convert an aromatic carbamoyl fluoride to the corresponding isocyanate, the process comprising gradually

Art Unit: 1621

introducing carbamoyl fluoride, in a dissolved or finely dispersed state in a solvent into a solvent heel at a temperature of at least 80 C.

Zanker teaches preparation of isocyanates of the formula R-N-C-C. from carbamyl halides of the formula wherein R can be aromatic. Suitable starting materials include trifluoromethylphenyl. See column 2, line 58. Suitable solvents include chlorobenzene. See column 3, line 20.

Zanker fails to recite that the carbamoyl fluoride is introduced in a solvent heel.

However, Zanker teaches that the reaction proceeds in the presence of solvents.

Those of ordinary skill would have expected that this also includes solvent heels.

Therefore, the use of solvent heels is well within the motivation of those of ordinary skill.

The reaction proceeds at a temperature of from 80-190 C. See column 3, lines 10-13.

Claims 1-7 and 9-24 are rejected under 35 U.S.C. 103(a) as being unpatentable over Zanker in view of GB 898.

Zanker fails to teach the reaction in the presence of hydrogen fluoride. In this regard, GB 898 teaches that carbamic acid fluoride, an intermediate, is converted to p-trifluormethylphenyl isocyanate in the presence of xylene and hydrofluoric acid.

Therefore, the addition of hydrogen fluoride would have been prima facie obvious since GB 898 teaches that adding hydrogen fluoride is used as a reactant and a solvent.

Conclusion

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Karl J. Puttlitz whose telephone number is (571) 272-

0645. The examiner can normally be reached on Monday to Friday from 9 a.m. to 5

p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's

supervisor, Johann Richter, can be reached at telephone number (571) 272-0646. The

fax phone number for the organization where this application or proceeding is assigned

is 571-273-8300.

Information regarding the status of an application may be obtained from the

Patent Application Information Retrieval (PAIR) system. Status information for

published applications may be obtained from either Private PAIR or Public PAIR.

Status information for unpublished applications is available through Private PAIR only.

For more information about the PAIR system, see http://pair-direct.uspto.gov. Should

you have questions on access to the Private PAIR system, contact the Electronic

Business Center (EBC) at 866-217-9197 (toll-free).
